DETAILED ACTION

Drawings

1. This application has been filed with informal drawings which are acceptable for examination purposes only. Formal drawings will be required when the application is allowed.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-56 are rejected under 35 U.S.C. 102 (b) as being unpatentable over the

Publication of Jun Rekimoto.

As for claims 1, 8, 17, 27, 32, 36, 43, and 52, Jun Rekimoto teaches a display (Fig. 3) and a hand-held electric device, including pagers, and cell phones. Instead of using a pen or a touch sensitive display, there are other possibilities to operate hand-held devices. They are using a tilt as the input method corresponding to a navigation sensor.

As for claims 2 and 37, Jun Rekimoto teaches instead of moving the menu items, it could also be possible to control the cursor by tilting while menu items are fixed on the screen (column 3, lines 25-27) corresponding to said change comprises at least moving the cursor.

Art Unit: au 2674

As for claims 3-5, Jun Rekimoto teaches that it is possible to control a cursor by tilting while menu items are fixed on the screen. The equation on (column 4, lines 12-26) simultaneously teaches how to control the three effects of viewing transformation like panning, zooming and rotating corresponding to at least moving a cursor, panning, scrolling and navigating part of said image.

As for claims 6-7, 13, 15, 41-42, 48, and 50, Jun Rekimoto teaches using both tilt and buttons, it is possible to build several interaction techniques ranging from menus and scroll bars, to more complicated examples such as a map browsing system and a 3D object viewer (column 1, lines 5-8) corresponding to first and second buttons, whereby said movement of said electronic device, said first button, and said second button may be operated in cooperation to mimic more than one function of a computer mouse being used with a graphical user interface.

As for claims 9-12, 14, 16, 18-26, 28-31, 33-35, 37-40, 44-47, 49, 51, and 53-56, Jun Rekimoto teaches the user controls the location of the cursor and looks around the map by keeping the button depressed and rotating the display left and right, or up and down (Fig. 3).

As for claim 38, Jun Rekimoto teaches viewing transformation can be done by panning (column 4, line 30) corresponding to said change comprises at least panning at least part of said image that is showing on said display.

As for claim 39, Jun Rekimoto teaches several interactive techniques ranging from menus to scroll bars (abstract) corresponding to said display comprises at least scrolling at least part of said image that is showing on said display.

Art Unit: au 2674

As for claim 40, Jun Rekimoto teaches Fig.2 which shows at least part of said image corresponding to said change comprises at least navigating at least part of said image that is showing on said display.
